

# New Architectural Bender Conveyor Wheels

## Reference #046

As part of Glasstech's ongoing drive to provide our customer base with improved product we have engineered a new wheel for use on our Architectural Bending and Tempering Systems. Commencing 30 June 2006 Glasstech will no longer replenish inventory of the "Old Style" wheels identified below. When the inventory of the "Old Style" wheels is diminished, Glasstech will no longer offer them for sale. A "New Style" Replacement Wheel is available through Glasstech and can be ordered utilizing the new part numbers listed below. These replacement wheels are injection molded and include the outstanding features below:

- No gluing and no tuck point on the wheel surface. This leads to a more closely controlled outer diameter.
- A more durable design that is expected to result in a longer service life for the wheels; when properly operated and maintained.

The part numbers for the Architectural Bender wheels are:

### Old Style Fiber Wrapped Wheels

Glasstech part number 47B-833-A210-B →

### New Style Injection Molded Wheels

Glasstech part number A-0833A00Z2006B →

Since there are subtle differences in the design of these wheels we do not recommend small scale replacement of "Old Style" wheels with small scale replacement utilizing the new wheels. Glasstech recommends that all wheels be replaced within an entire bed. An entire bed should be replaced when converting to the new wheels. Once an entire bed is converted, wheels can be replaced on a small scale by replacing only those wheels within a bed that are worn. It is your choice to replace all wheels. Glasstech will only guarantee the availability of the "Old Style" wheels through 30 June 2006.

Please contact our Aftermarket Sales Department for detail concerning pricing of these new wheels for your application. Special discounts are available for large quantity purchases of the "New Style" wheels such as would be necessary for the replacement of an entire bed. Effective immediately quantity discounts are no longer available for the "Old Style" wheels.
